

FEM-IGENE™

‘ Truly Revolutionary ’

An Eco Friendly Sanitary And Clinical Disposal Unit

Sanitary and Clinical Disposal Unit

Feminine hygiene product is a general euphemism used to describe personal care products used by women during menstruation, vaginal discharge and other bodily functions related to the genital organs.

One such discharge is menstrual blood, which in itself is not dirty, neither does it necessarily smell bad. However, once menstrual blood comes into contact with oxygen or air it will exhibit a distinctive malodour.

As part of feminine hygiene it is vital to change pads more regularly during the day. It is very important that the requirements of your female staffs, visitors and customers at the time of menstruation are met within every office or commercial establishment.

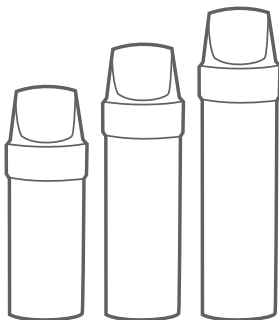

FEM-IGENE provides a complete solution for Feminine Hygiene.

It is seen most often that sanitary waste like Sanitary Napkins, Tampons, Liners etc. have been flushed down the toilet. Since, there is no such thing as a soluble sanitary towel, flushing sanitary items down the toilet, blocks the drainage system completely.

FEM-IGENE is a revolutionary, stylish sanitary disposal unit from **TERRACYCLIC**, New Zealand, a product of extensive research. The unit is user friendly, safe, discreetly hygienic sanitary disposal system that will ensure your female customers, visitors and staff feel comfortable using your facilities in **“Away From Home”** washrooms.

FEM-IGENE Disposal System looks sleek with a cylindrical shape and are compact & unobtrusive.

The units are available in three sizes

Small:
6.5 litre
50cm tall
15cmø

Regular:
13 litre
70cm tall
15cmø

Large:
26 litre
80cm tall
20cmø

Each unit is charged with biodegradable granules, which release a protective vapour throughout the unit safeguarding all users against harmful bacteria associated with pathogenic waste. The unique cone shaped lid gives users the option to dispose of dressings without touching the outer areas.

The cartridge with an “ECM” additive injected into the components in the manufacturing process facilitates complete biodegradability of the plastics.

Servicing the Unit

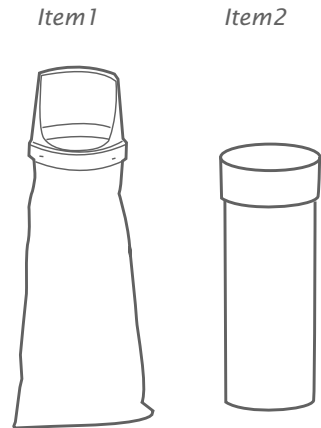

The unit is uniquely designed to enable self-service

The base unit (Item 2) is fitted with a disposable cartridge (Item 1). The cartridge (Item 1) consists of lid, flap and a liner. Each cartridge is charged with biodegradable deodorisers. On every service the cartridge (item 1) is replaced completely with a fresh new cartridge which means that the base unit (Item 2) maintains a clean, new appearance, and remains a permanent fixture in the washroom.

The cartridges (Item 1) are easy to store, replace and disposed off. There is no cleaning involved. The cartridge (Item 1) is simply inserted into the (Item 2) cylinder and then disposed off after each service.

The simple cartridge system makes the disposal unit serviceable by a regular cleaning staff.

Options are available either to free-stand or wall-mount the unit, which allows cleaning staff to effectively sanitise the area underneath.

Suitable locations of FEM-IGENE

- Hospitals & Health centers for disposing Clinical Waste. The unit can be coded for waste segmentation.
- Educational Institutions can implement **FEM-IGENE**, spread awareness on feminine hygiene among female students and also help create women-friendly toilets.
- Offices, Organisations and Institutions keen to implement a feminine hygiene disposal system as part of staff welfare and also to keep the drainage blockage free.
- Isolated locations that cannot be reached for servicing.
- High security areas where service personnel are not permitted like embassies, restricted area in the premises.

Eco Friendly

The Disposal System as a product is endorsed by **Carbon Footprint Ltd.** under the premise that the product met one of the three conditions outlined by Carbon Footprint Ltd for approval:

- The product's carbon emissions have been calculated and offset through either one of our offset programmes or an alternative certified offset provider.
- The product has a significantly lower carbon footprint compared to similar products currently available on the market
- By using the product, it will help other people or organisations reduce their carbon emissions

Carbon Footprint Limited, a leading carbon management consultancy service on carbon footprint, has accredited the unit with 2-star in a 3-star rating system.

This helps organisations reduce their carbon emissions.

Highlights

- Free standing or wall-mounted sanitary/clinical waste disposal designed to put you in control of your waste streams and budgets.
- It can reduce the risk of cross infection and offensive odour due to the buildup of waste matter to the underside of standard unit lids and chute areas.
- Low risk of cross infection or contamination, due to complete cartridge change.
- It is multi-purpose unit, which can also be used for safe disposal of clinical waste like cotton swabs, rubber gloves etc.
- The streamlined outer cylinder saves space, looks smart and is easy to install and service.
Suitable for in-house service
- The self-deodorising cartridge seals-in waste and is quick and easy to replace.
- No complicated cleaning or storage facilities required.
- This truly is a unit, which any housekeeping staff can service by simply replacing the cartridge without viewing the waste.
- Designed to fit into even the smallest washrooms
- Minimum contact with easy flip lids.
